

# Trimble® TerraFlex™ Detailed Features

## Mobile Data Collection

Set up projects and send your teams out with multiple form templates for an optimal form fulfillment workflow.

## Uses Your Existing Devices

Supports iOS, Android, and Windows® Mobile. Field workers can work with their choice of device even their personal phone, and have the same experience, collect data in the same way. Eliminate the need to carry GPS devices, cameras, clipboards, and printed maps, by centralizing onto a single device.

## Keeps Your Data Organized

With multiple field workers and numerous jobs you need to keep it all organized. Group field data collection assignments into projects and assign users to individual projects. Streamline data collection workflows by keeping field users focused on their key projects.

## Keeps You in Sync

Field data is automatically synced with a central server, streamlining office operations and driving higher productivity and cost savings. No need to return to the office to enter field data. No double entry of information re-typing paper forms. Save time, reduce errors.

## Work Anywhere

Work even in remote areas, with data collection that is fully functional offline. When field workers are back in range, data will automatically synch back to the office.

## Hosted in the Cloud

Review the latest data coming in from the field and manage projects in the office with the knowledge you and your team are always up to date.

## Fully Managed

Trimble TerraFlex takes care of all the database administration and management, so you don't need to expend resources to manage another system. Focus on the job at hand without having to work back end systems.

## Streamlined Data Management

With spatial and data oriented views you can view projects and incoming data the way you want to. And you can filter, sort, and export by form attributes to easily manage large datasets.

## Works with Your Systems

Transfer data to and from current systems. Import and export to a variety of common formats used for data exchange - XML, CSV, and KML.

## Quick Template Set Up

Whatever your data collection needs, the drag and drop interface makes for efficient form template creation. Group and organize fields to create simple to navigate forms that allow for fast entry.

## Form Template Versioning

Project needs change over time. Data integrity is ensured as form templates can be edited and seamlessly rolled out to the team as project requirements change.

## Manage Your Team

Administrators can set user permissions to allow varying levels of access to field and office components.
