

Everglade Software Project Compatibility

August 21, 2013

Issue

Everglade 2.1, released in April 2013, will not open project files created in previous versions of Everglade software. This is because version 2.1 includes schema changes for all regions related to updating forms to the US Army Corps version 2.0 forms. Projects created with version 2.1 will have the schema necessary to support these forms. Also, versions of Everglade cannot be installed side by side. Everglade 2.1 requires previous versions to be uninstalled.

List of changes in version 2.1:

- Alaska Region is now included
- All forms updated to US Army Corps version 2.0
- Numerous formatting corrections and improvements for all regions
- Vegetation lists for all regions updated
- Correction for issues reported by users

Everglade now supports the following regions:

- Alaska
- Arid West
- Atlantic Gulf and Coastal
- Eastern Mountains and Piedmont
- Great Plains
- Northcentral and Northeast
- Midwest
- Western Mountains and Valleys

Solution

Open projects in the version of Everglade that was used to create them. Export and save the finished forms. Create new projects in the new version of Everglade.
